SOURCENEXT Takes Voicemail Into the 21st Century with iGotcha Transcription Mobile App
Must-Have Mobile Voicemail Assistant for Global Professionals Instantly Transcribes in 14 Languages Using WiFi Alone

SAN FRANCISCO, CA – September 12, 2017 -- SOURCENEXT (TYO: 4344), Japan's largest software publisher and distributor, announced transcription engine updates to its mobile voicemail assistant app iGotcha, which transcribes voicemail in 11 languages and delivers it instantly to the platform of your choice (SMS, email, Facebook Messenger, push notification) with only WiFi. The must-have voicemail assistant for global professionals and jetsetters eases business communication and allows instant access to voicemails without carrier service. iGotcha is available for iOS and Android and will be showcased by SOURCENEXT at Mobile World Congress Americas at the Moscone Center in San Francisco, September 12-14, 2017, at booth W.624.

"iGotcha gives voicemail the upgrade it desperately needs, taking it from the outdated answer machine we all dread checking to a convenient and useful tool for global professionals," said Noriyuki Matsuda, CEO and founder of SOURCENEXT. "iGotcha was born out of real pain points we have faced both as an organization and personally, working with partners around the globe. We designed iGotcha to solve the inconvenience of misunderstanding a voicemail message due to poor voice quality, accent interpretation, or fast talking, making it easier for global professionals to manage messages and respond in a polite and timely fashion.

By delivering text and audio to several channels over the cloud silently, discreetly, and out of cell network range, iGotcha helps global professionals keep up with their voicemail at the speed of business, without the disruption of stopping to listen to voice messages. iGotcha's voice-to-text transcription for 14 languages allows users to give each message the prompt attention it deserves, which is often a cultural necessity that can have serious business ramifications if not upheld. iGotcha currently supports transcription for:

- English (Indian)
- English (American)
- Spanish (Mexican)
- Spanish (Spain)
- Mandarin (Chinese)
- Mandarin (Taiwanese)
- French (Canadian)
- German
- Korean
- Cantonese (Hong Kong)
- Arabic
- Italian
- Russian
- Japanese
